

Exhaust System Heat Wrap BriSCA F2 Statement 19th February 2015 (E&OE)

Exhaust System Heat Wrap

- BriSCA F2 has received a question from a driver (via the published BriSCAF2Tech@outlook.com email address) regarding the use of heat-wrap on exhaust systems.
 - **For the avoidance of doubt, the use of heat wrap on any part of the exhaust system is **NOT permitted**.**
 - The following rules, as listed in the 2015 rulebook, while not explicitly stating heat wrap, cover this clarification:
 - 200.4** Unless a rule explicitly states an action can be taken, a modification made, or a replacement part sourced/manufactured, then such actions/modifications/replacements are NOT permitted. This is the overriding principle for ALL technical rules.
 - 200.5** Unless these published rules explicitly state something can be implemented, then it CANNOT.
 - 223.8** Additional exhaust attachments, tail pipes, and performance altering devices are NOT permitted.
-
